# Go Fish

## Hackathon Pitch · March 2026

Go Fish (not the card game) an AI-powered group activity planner that helps friends decide what to do together.

**Members:**
Christopher Boebel
Kutay Ozbagci
Muhamad Adib Alhaj Ibrahim
Mohammad El-Musleh

# The Market Problem

Who has this problem?

- [Primary] Young professionals, 22–35, who are the default organiser in their friend group.

How big is this market?

**~110M+**

MILLENNIALS/GEN Z PLANNERS
(Across US & Europe)

**$380M**

AFFILIATE OPPORTUNITY

# The Market Problem

## How do they solve it today and why does that suck?

### Why current solutions fail

| | |
|---|---|
| WhatsApp / iMessage polls | No structure; loudest voice wins |
| Doodle | Schedules only — still no “what should we do?” |
| “Anyone have ideas?” | The same 3 suggestions every time |
| Nothing | ~30% of planned events never happen |

Core gap

**No tool connects all three:**

- when everyone is free
- what everyone wants
- AI makes the final suggestion

**That missing link is the market opening.**

Decision paralysis is the product defect.
We fix the full loop.

# Go-to-Market Plan

How would you get your first 10 customers?

- DM people in WhatsApp groups and set up an event.

What's your distribution advantage?

- Each event invite creates a new user. One organiser with 8 friends sends 8 invite links; every invitee can become a future organiser.

What would make someone switch from their current solution?

- No app install.
- No account required to respond.
- It is free.
- One event is enough to prove value.

# Business Model

Who pays?

- The **users never pay**. The activity and experience providers pay

How much would they pay?

- **Sponsored 3rd Suggestion**
- **Affiliate partners** (e.g. Ticketmaster) commission rate: 5–15% per booking

What's the unit economics?

- Go Fish operates at a 98% Gross Margin: It costs us $0.08 to coordinate an event that generates ~$4.00 in high-intent affiliate and ad revenue.

# Your Solution

What you built in one sentence

- Go Fish collects group availability and preferences, then uses AI to suggest the perfect activity.

Why is your approach 10x better than alternatives?

- Doodle stops at scheduling. WhatsApp stops at conversation. Go Fish closes the loop.

| Feature | WhatsApp Poll | Doodle | Go Fish |
|---|---|---|---|
| Collects availability | ✗ | ✓ | ✓ |
| Considers preferences | ✗ | ✗ | ✓ |
| AI Activity Suggestions | ✗ | ✗ | ✓ |
| Confirmation to everyone | ✗ | ✗ | ✓ |

# Why You / Why Now

Why are you the right team to build this?

- Shipped a production-grade architecture (not a prototype) during a hackathon.

Would you work on this full-time if it got traction?

- Yes. The infrastructure is built, the market is ready, and the next step is to scale real usage.
- The infrastructure is ready for scale (e.g. LLM costs have dropped 90%+).

# We Shipped It.

Try it yourself...
